Archaeometric approaches to Byzantine ceramics in Lyon laboratory

The study of ancient material remains — particularly ceramics — through the methods of the natural sciences makes it possible to address questions of provenance, development of technology, and patterns of exchange and connectivity, providing evidence for broader historical reconstructions. The Lyon laboratory holds the largest existing database of chemical analyses of Byzantine ceramics, which enables the reconstruction of processes and historical dynamics that are otherwise only fragmentarily reflected in written sources.

21.11.2025, 15:00 Uhr

GWZO, Specks Hof (Eingang A),

Reichsstr. 4–6, 4. Etage

Konferenzraum

Gast der Abteilung »Mensch und Umwelt« / verantwortlich: Dr. Anastasiia Korokhina
